

### Steps to build Scilab- 5.5.2 :

- Download Scilab source folder ( can visit [https://github.com/shivendra3/scilab\\_for\\_xcos.git](https://github.com/shivendra3/scilab_for_xcos.git) for the same) and extract it.
- If permission issue occurs, use chmod to grant permission. For Eg. if name of extracted folder is scilab-master\_5.5.2, use :  

```
chmod ugo+wx scilab-master_5.5.2/ -R
```
- Go to the scilab folder through terminal and update using :  

```
sudo apt-get update
```
- Build using : `sudo apt-get build-dep scilab`
- Configure using : `./configure --disable-static-system-lib`
- Make using : `sudo make -j4`
- Now run scilab using : `./bin/scilab`

### Note :

If at any step, “*access denied*” or some other related error occurs, again grant permission to the scilab folder as before and then redo the step.
